LAB EXERCISE – 11B

Goal of the lab exercise is to develop a basic code by using C#, F# and Visual Basic programming languages. You can use www.tutorialspoint.com or other web sites for tutorials and to compile online.

Write a basic program, which calculates the average of an array which has 7 elements, each assigned a value and compare the result with 0, as follows.

define an array and assign values

add all the values by using a loop

calculate the average

compare the average with 0, if it is greater than zero display positive, else display negative
