LAB EXERCISE – 12

Goal of the lab exercise is to develop a basic code by using one of the programming languages presented this week, JavaScript, Go or Fortran.
You can use www.tutorialspoint.com or other web sites for tutorials and to compile online.

Write a basic program, which calculates the average of an array which has 5 elements, each assigned a value and compare the result with 0, as follows.

1. define an array and assign values
2. add all the values by using a loop
3. calculate the average
4. compare the average with 0, if it is greater than zero display positive, else display negative
